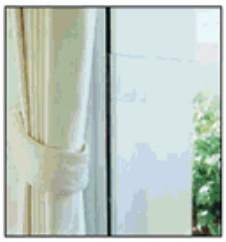
Austview Sashless Windows offer a range of sashless double hung windows in both timber and aluminium.

This unique window has frameless glass sashes which are counter balanced with each other and overlap 100mm at the centre, giving a clear uninterrupted view.

The window is operated by a continuous aluminium lift to the bottom of the lower pane of glass and optional acrylic lift blocks bonded to the glass at the centre or bottom are available.

Windows are locked in the closed or vertical (100mm) position by a keyed lock and a removable draft seal is included at the glass overlap.

Flyscreens are easily added and for additional security stainless steel Supa Screens are available.



Air Conditioning Solutions

Austview Sashless Windows have passed air infiltration tests in accordance with AS4420.4, making them suitable for air conditioned buildings.
